

## CWI Modular Building Nampa Campus

10,800-square-feet of  
Administration and Office  
Buildings

Located in Nampa, ID

Time to Complete: 107 Days

### Project Overview:

The College of Western Idaho was expanding. As a result, they needed additional administration and office space to support their increasing enrollment and offer the flexibility to relocate the buildings in the future. Pacific Mobile Structures provided them with three 60X60 modular buildings. With RTU units in the roof, the modified building height and various textures and colors offered the appearance of traditional stick-built structures while matching the existing buildings. The buildings also feature upgraded lighting units that can be adjusted to accommodate future reconfigurations of each of the buildings.

### Highlights:

- RTU units in the roof
- Modified building height
- Upgraded lighting units that can be adjusted to accommodate future reconfigurations
