

Puyallup School District Kessler Center— Summit Building

2,880-square-foot Educational
Alternative Learning Center
Located in Puyallup, WA

Time to Complete: 5 Floors – 30 Days from delivery to occupancy.

Project Overview:

When the superintendent of the Puyallup School District met the Pacific Mobile team at a WASBO conference, he saw what custom modular construction could do, and he was intrigued. So, when the school district needed to relocate their alternative learning program, they took it as an opportunity to entertain their curiosity with a permanent custom modular building.

A 2,880-square-foot custom modular building was placed. The exterior of the building features a shed roof, high-end metal siding, covered entry with a half wall for a restricted view, customized fiberglass windows, and external HVAC screening. The interior of the building features an open hallway displaying an architecturally and acoustically sound cloud T-grid ceiling. There's also a two-hour separation fire barrier providing protected compartments where students and staff can safely exit the building in the event of a fire.

After the completion of their first custom modular building, the Puyallup School District was very pleased. Now, when future expansion needs arise, they know they can turn to modular construction to get the job done.

Highlights:

- Shed Roof
- High-end Metal Siding
- Covered Entry with Half Wall
- External HVAC Screening
- Customized Fiberglass Windows
- Cloud T-Grid Ceiling
- Two-Hour Separation Fire Barrier
