

Chevron Fuels and Renewable Solutions Quality of Life Project

4,636 Square Feet of Office &
Administration Space

Located in Hoquiam, WA

Project Overview:

As Chevron Fuels and Renewable Solutions expanded its footprint in Hoquiam, Washington, the company needed additional facilities to support personnel and improve the overall employee experience on-site. Looking for a solution that could be delivered efficiently while providing flexibility, durability, and customization, Chevron turned to Pacific Mobile Structures. Known for quality buildings and dependable service, Pacific Mobile Structures partnered with the customer to create a customized Quality of Life project designed to meet the needs of a growing workforce.

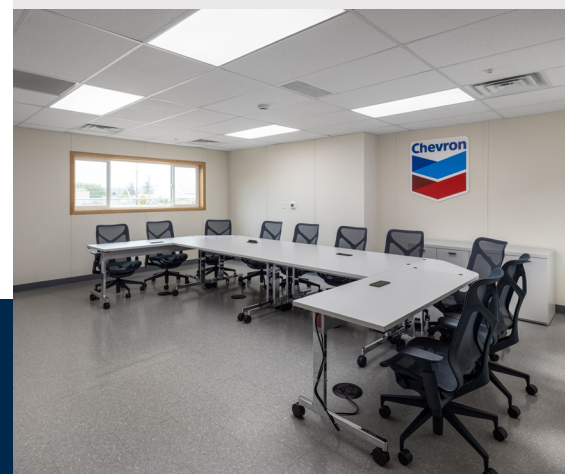

The project included a 24' x 60' lunchroom and conference room, a 14' x 50' restroom trailer, three 12' x 56' modular units, and one 12' x 40' modular unit. Manufactured by NW Building Systems, the facilities were designed to provide comfortable, functional spaces for employees. The lunchroom and conference room features a kitchen area that provides employees with a comfortable space for meals, meetings, and collaboration. A standout feature of the project is the custom restroom trailer, which incorporates a divided ceiling design to create distinct restroom areas while maintaining a clean, professional appearance.

Modular construction proved to be an ideal solution for Chevron, offering a reduced construction schedule, enhanced safety, design flexibility, reusability, and less material waste than traditional construction methods. Pacific Mobile Structures self-performed the installation and worked closely with the customer throughout the project to navigate challenges and ensure a successful outcome.

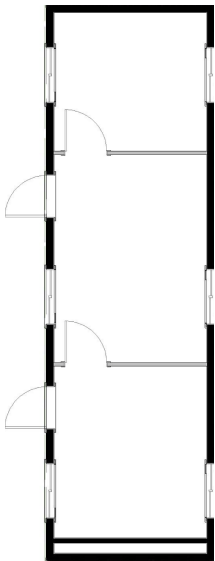

Today, the completed facilities provide Chevron employees with dedicated spaces that support comfort, productivity, and day-to-day operations. The project not only delivered the additional space the company needed but also strengthened the relationship between Chevron and Pacific Mobile Structures through collaboration, quality workmanship, and a shared commitment to project success.

Highlights:

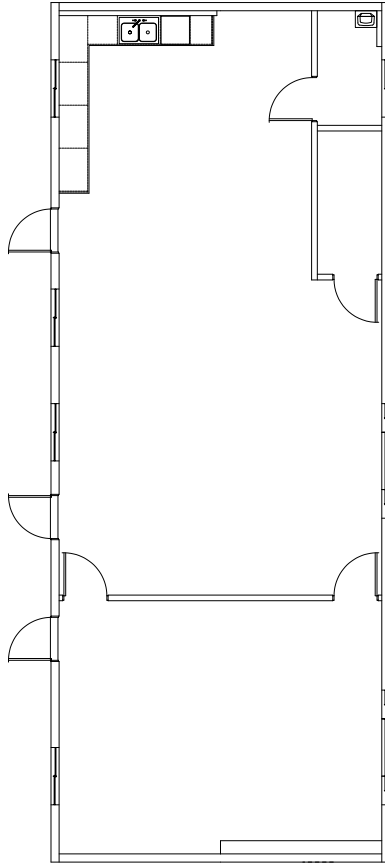

- 24' x 60' lunchroom and conference room with integrated kitchen
- 14' x 50' custom restroom trailer with divided ceiling configuration
- Three 12' x 56' modular units and one 12' x 40' modular unit
- Dedicated spaces for meals, meetings, collaboration, and breaks
- Custom design tailored to employee comfort and daily operations
- Flexible modular construction supporting future needs and reuse
- Durable, professional finishes designed for an active jobsite environment
- Coordinated installation and integration within an active operational facility
